Contents of the course

- Linear mixed models for continuous data.
- Marginal models for discrete data.
- Generalized linear mixed models for discrete data.
- Non-linear mixed models.
- Missing data.

Aims

- As a result of the course, participants should be able to perform a basic analysis for a particular longitudinal data set at hand.
- Based on a selection of exploratory tools, the nature of the data, and the research questions to be answered in the analyses, they should be able to construct an appropriate statistical model, to fit the model within the SAS framework, and to interpret the obtained results.
- Participants should be aware not only of the possibilities and strengths of a particular selected approach, but also of its drawbacks in comparison to other methods.

Applications:

Applications in Medicine (Epidemiology and Clinical Trials) and Biology.
